

OpenText Content Aviator

Reimagine productivity with an AI content assistant that drives faster decisions and intelligent automation

Benefits

- Activate knowledge faster
- Build trust into every GenAI interaction
- Ground GenAI in business context

You spend too much time searching for information, and you're not alone. More than half of knowledge workers lose two or more hours a day trying to find the right content, and 41 percent are stuck doing repetitive tasks that slow everything down.¹ Plus, manual processes and rising compliance demands make it even harder to move fast and stay focused. It's time to make a change.

That's why it's essential that an [AI content assistant](#) can fit securely in your flow, to help you summarize, draft, and extract insights. OpenText™ Content Aviator™ is built for exactly that. And because it's grounded in OpenText's trusted information management, you can count on it to deliver results that are accurate, compliant, and ready for enterprise scale.

Activate knowledge faster

You're under pressure to move faster, but content overload is slowing you down. Nearly 70 percent of organizations say their content is growing faster than they can manage.² AI content assistants bring generative AI into your daily work to help you find documents, get an insightful content summary from a file or a business workspace, and draft a relevant email in any language in seconds. You cut through the noise, reduce manual effort, and activate knowledge when and where you need it.

Content Aviator brings the power of generative AI and large language models (LLMs) to [OpenText™ Core Content Management](#), [OpenText™ Content Management \(Extended ECM\)](#), and [OpenText™ Documentum™ Content Management](#). The result? Smarter automation, faster access to insight, and more efficient, AI-powered content management across the enterprise.

Build trust into every interaction

Worried about data breaches, regulatory fines, and the inability to track who accessed what and when?

You can't deploy and scale GenAI without trust, yet 56 percent of organizations say data privacy and security are their top concerns when adopting GenAI.³ [Content Aviator is built with governance at its core.](#) It automatically applies roles, permissions, and audit trails to every interaction, while respecting your organization's classification, retention, and compliance policies. Unlike other software providers, OpenText doesn't share your data with third-party large language models, so your content stays private, protected, and fully under your control.

That means every action the AI content assistant takes, whether it's summarizing a document or drafting an email response, is traceable, policy-aware, and audit ready. Your organization maintains full visibility across your content and GenAI usage to help meet internal governance standards and external regulatory requirements. Enterprise-grade compliance frameworks, like ISO 27001 and SOC 2, are supported so that you can confidently scale GenAI across your organization without introducing risk.

Ground GenAI in business context

When your content is tied to real business processes, like customer cases, contracts, or project records, AI content management must have a full understanding of available content. That's what you get when your AI content assistant is able to focus through the power of business workspaces, central to OpenText [document management solutions](#). Instead of treating documents as standalone files, it sees the relationships, context, and purpose behind them. So when you ask it to summarize, draft, or extract insights, the intelligent content assistant delivers quick results that are relevant, accurate, and grounded in your business.

Unlock AI-powered productivity across every team

You're not just trying to find content, you're trying to get things done. [Content Aviator is your AI content assistant, built to move work forward.](#) Acting as a digital teammate across departments, from sales and HR to legal and customer support, it summarizes long documents, answers questions through conversational search, and drafts emails in seconds. Because it's embedded in the content platform you already use, there's no switching tools—just faster decisions, fewer bottlenecks, and smarter work.

Whether you're onboarding new employees, resolving customer issues, or reviewing contracts, using AI content management ensures less busywork and more time focused on what matters. That's why 58 percent of organizations already using AI report high satisfaction with their ROI.⁴

Ready to work at the speed of GenAI? Say goodbye to content chaos and manual tasks that slow you down. Content Aviator is your AI content assistant built to understand your business, respect your governance, and accelerate decisions across every department. Embedded within OpenText's trusted document management platforms, it delivers AI content management that's secure, scalable, and enterprise ready. It's time to boost productivity, reduce risk, and put your content to work.

Product capabilities	Description
Search and filtering	Finds answers using natural language and metadata queries, delivering relevant results based on context and user permissions.
Summarization	Extracts key insights from lengthy documents and business workspaces for quick understanding.
Content generation	Creates emails, tables, lists, and graphs from existing content to accelerate work.
Data visualization	Builds graphs and tables from unstructured document data.
Document comparison	Compares content across multiple documents to identify discrepancies and support decisions.
Format understanding	Extracts insights from thousands of legacy formats including Microsoft 365 files, PDFs, emails, CAD, and more.
Metadata analysis	Refines AI-generated insights using metadata filters to adjust scope and focus.
Multilingual support	Supports global collaboration by responding in users' preferred languages and understanding queries across multiple languages.
Business workspace context	Ensures relevance, compliance, and contextual accuracy by grounding AI responses in structured business workspaces within OpenText Core Content Management, OpenText Documentum Content Management and OpenText Content Management (Extended ECM).
Retrieval-augmented generation (RAG)	Uses enterprise content to ground AI responses based on user access and selected workspaces.
Scalability	Uses an innovative <i>progressive indexing</i> architecture to assure high-volume GenAI content processing and facilitates efficient enterprise-wide expansion.
Flexible deployment	Deploys in the cloud, while connecting to an OpenText content platform deployed on-premises, in a private cloud, in a hybrid environment, or in a SaaS environment.
AI-to-AI integration	Connects AI through integration with solutions such as Salesforce Agentforce. Additional integrations with SAP Joule and Microsoft Copilot to extend AI capabilities across platforms are coming soon.
Multiple GenAI LLM models	Supports multiple GenAI models, including Google Gemini on Google Cloud, OpenAI on Microsoft Azure, and Nova on Amazon Web Services.
Information governance	Embeds ethical AI practices, data privacy, and content governance into every interaction.

Deployment options

Accelerate cloud strategies with OpenText cloud experts

- OpenText Managed Private Cloud

Run anywhere and scale globally in the OpenText public cloud

- OpenText Content Aviator runs in the OpenText public cloud with a user subscription

Run anywhere and scale globally in the hyperscaler cloud of your choice

- Hyperscaler cloud partners (OpenText Private Cloud, AWS private or public cloud, GCP private or public cloud, Azure private or public cloud)
